## Every Month Near Death.

Foster, Ark.—Mrs. Fannie Ellis, of Foster, says: "I was sick for seven years, and half the time could not stand on my feet. Every month I was near death. I tried Cardui, and in two months I was cured, and am now stout and healthy. My friends all ask me now what cured me. My looks are a testimonial to Cardui." No matter how serious or long standing the trouble, Cardui will help you. It is a mild, vegetable, tonic remedy, adapted especially to relieve and cure the common womanly ailments. It relieves womanly pains and restores womanly strength. Try Cardui.

## Carelessness Cause of Fires.

More than 50 per cent of all fires are caused by simple carelessness, which is unnecessary and criminal. Repairs to dilapidated buildings, the removal of all fire breeding material, care in burning weeds and rubbish, the placing of engines at a safe distance from buildings, the removal of oily waste, proper ventilation—in brief, plain common sense, will minimize the danger from this class of fires.

Something new at 314 S. Main. Expert upholsterers from St. Louis and a beautiful line of upholstering tapestries.

## Capriffs in Winter.

Upon the authority of a government official it has been recently announced that the capriffs may be carried over winter weather if kept in a protected place and packed in layers of sand. This discovery assures the fig-grower of a supply of capriffs regardless of the severity of the weather.

## IN DEEPEST WATER

Secrets of the Sea Are Revealed In Dredges.

Explorations of the "Ocean's Floor" Made—Strange Fish Brought to the Surface Succumb at Once to Changed Pressure.

We hear much of land exploration, of expeditions leaving day by day to place man's record in some unknown part of the world, but little is told of the exploration of the ocean bottom where the vast plains and mountain chains covered miles deep with water are being mapped and charted and are yielding to the upper world the strangest creatures of nature. Yet this work is being carried on in almost every sea of the globe, quietly and persistently, although almost unknown except to the scientific world and "those who go down to the sea in ships," says Popular Mechanics.

For years America's place in these important operations has been held by the Albatross, an iron, twin screw steamer of 1,000 tons' displacement, built for the United States fish commission in 1883 and fitted with apparatus for marine work of every description. Its equipment includes machines for ascertaining the depth of the water and character of the bottom, dredges for obtaining fish and other animals from the greatest depths, apparatus for shallow water investigations and a complete laboratory, where specimens may be identified and packed, and scientific studies carried on.

The most important work which the Albatross has done, and that for which it is best equipped, is deep sea sounding and dredging. It is by means of soundings patiently taken one by one that almost every important submerged mountain chain and peak has been plotted and that we know the materials which cover the ocean floor. In the great depths the water is just above the freezing point, no matter what its temperature at the surface. When the Albatross, was in the Dutch East Indies and we were working in a temperature of 110 degrees Fahrenheit, the men who sorted out the specimens in the bottom of the dredge net were dressed in the thinnest of gauze undershirts, but wore long mittens to protect their hands and arms from the ice cold mud. This was a great comfort, too, in that blistering heat, for a cool drink could be obtained in a very few minutes by burying a bottle in the mud, no matter how hot the sun which was blazing down upon us.

By means of a register the number of feet of wire which has run out before bottom is found is indicated, and this is reported to the officer in charge. Thus at every sounding the depth of the water, its temperature and specific gravity at the bottom is compared with that at the surface, and the character of the ocean floor are learned, and the chart prepared accordingly. The deepest sounding which has yet been made by any ship was in the Pacific ocean between the Hawaiian Islands and Japan and showed a depth of six and one-half miles.

There are two styles of dredges by means of which the animals and fish of the great depths are captured—the nets which are dragged over the bottom and those trawled just below the surface. The bottom dredge consists of a pair of heavy iron running frames connected by one or two crossbars, twelve feet in length. Fastened to this frame is a cone-shaped bag 30 feet long, made of heavy web, the end of which is closed by a lashing. The dredge is hung over the starboard side of the ship on a long boom and by means of a steel cable is slowly lowered to the ocean bottom. A dial indicates the number of feet of wire out, and a pointer on a scale shows the strain, which often amounts to five or six tons, upon the cable.

As soon as the dredge has reached the bottom the ship steams ahead at about two-thirds of a mile an hour, dragging the net over the ocean floor. It remains down for an hour or so, and is then slowly lifted to the surface. The deepest haul which the Albatross has ever made was five and one-half miles, and it was 17 hours from the time the dredge was first lowered until it again appeared. The net is towed beside the ship for a few minutes, then it is swung on board, the lashings at the bottom unfastened and the contents dropped upon a table. The ice cold mud is carefully washed away and the specimens carried to the laboratory.

It is like opening a Christmas package for a naturalist to watch the dredge come to the surface bringing unknown treasures from the hidden depths. Strange fish are found which carry incandescent lamps far in front of them to light their way in the inky blackness miles below the surface; others with phosphorescent spots along their sides which must glow like the portholes of a steamer at night; still others with their eyes upon long stalks or with no eyes at all. And, poor things, when released from the terrible pressure to which they have become accustomed, their eyes often pop out of their heads and their stomachs turn inside out.

## Fastidious Shopper.

"Hard to please, is she?"  
"Yes, she couldn't buy a two-cent stamp without having the entire stock trotted out for inspection."

## SPECIAL TO WOMEN

The most economical, cleansing and  
germicidal of all antiseptics is

## Paxtine

A soluble Antiseptic Powder to  
be dissolved in water as needed.

As a medicinal antiseptic for douches in treating catarrh, inflammation or ulceration of nose, throat, and that caused by feminine ills it has no equal. For ten years the Lydia E. Pinkham Medicine Co. has recommended Paxtine in their private correspondence with women, which proves its superiority. Women who have been cured say it is "worth its weight in gold." At druggists, 50c. large box, or by mail, The Paxton Toilet Co., Boston, Mass.
